

VR || STRIPS sash window system

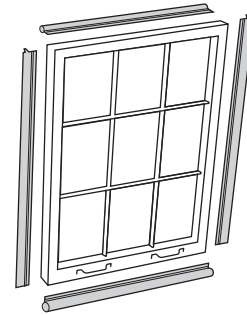

VR Strips is a new product that makes insulating sash windows significantly smaller, lighter, easier, more attractive, and more sustainable. VR Strips are provided as a complete set with instructions, allowing almost all (existing) lower and/or upper sash windows to be sealed quickly and easily.

VR Strips is designed with great precision and such ingenuity that it fits into the existing window rebate, takes into account the most common window situations and combines flawlessly with the original counterweight or balance spring systems. VR Strips is also compatible with the HoutjeTouwtje® system by HappyLift.

VR Strips preserves existing window, which is an important advantage. A reconstruction works just as well with VR Strips. It provides a good balance between energy savings, cultural heritage, and a healthy indoor climate. And, the price is amazingly interesting.

no adjustments to the window frame, only fastening the VR Strips into the rebate

minimal adjustments to the sash window, VR Strips clamped into milled rebates
